

Lighting Control

Go Electronics features Lutron Superior lighting control: Also offers HAI's UBP power line carrier digital lighting control: Lutron's Home Works system is geared principally toward lighting control, although it offers capabilities for integrating other elements. Home Works allows you to create "paths" of light, choose preset lighting moods in designated areas and integrate a variety of home-control functions into attractive, simple-to-use keypads. Home Works also enhances security in a home: "Master On" panic buttons turn on selected groups of lights instantly while an interface to your security system turns on or flashes lights to thwart intruders. Additionally, a unique "vacation" mode simulates occupancy while you are away. Home Works uses "smart" dimmers and switches, which typically mount in the same location as conventional light switches. They include master controls that provide whole-house command and local controls, which are designed for individual rooms or related areas. These controls communicate with a central panel that provides additional interfaces for entertainment systems, security systems, home computers, telephones and other controllers such as those from Elan and HAI.

And because Home Works uses your existing wiring it is an economical solution for retrofitting. Even after installation, GoElectronics can easily add rooms and areas to your system. CHANDELIER

Switch or dim one or more fixtures such as a chandelier. PLAYROOM

Control several groups of lights. Illuminated LED lets you see if any lights are on in the room. READING

Overhead lights dim to a soft level; reading lights intensify. PATHWAY

Push a button and programmed lights softly illuminate a path to your selected destination. Typical pathways are master bedroom to kitchen, garage to master bedroom, master bedroom to pool. SHOWTIME

Control more than just lighting in a room. Push and watch as lights dim, projection screen lowers, video projector descends from the ceiling, and motorized shades close. ENTERTAIN

Establishes the perfect mood for entertaining throughout your home Touch the button and lights adjust to the right level, window shades open or close, landscape lighting turns on, etc. ALL OFF

Turn off lights in a single room, "sweep off" lights in several rooms, or turn off all lights throughout your home.

SUNSCREEN

Touch this button, and a Lutron's Serena Window Shading System will lower a sunscreen shade over the windows.

Serena shades reduce glare and control heat loss or gain. SPA

Prepare your spa and enjoy a relaxing soak.. AWAY

Turn off whole-house functions you no longer need while turning on new functions. VACATION

Unique adaptive learning feature memorizes daily lighting patterns in your home. System replays memorized lighting patterns to simulate occupancy while you're away. No need for complicated programming schedules. ALL ON

Hear a disturbing noise at night? Touch the button, and flood the interior and exterior of your home with light. Security ON

Your security system has been tripped, you are at a friends home, Your home siren sounds and the lights begin to flash, your house becomes a light house warning the neighbors of the problem. Lutron Shading Solutions Sivoia

QED® roller shades offer ultra-quiet operation, uniform movement of multiple shades, minimal light gaps and convenient one-touch control from elegant keypads and intuitive handheld remotes. The system can seamlessly integrate with Lutron lighting controls to provide control of all the light in any space, or with other systems such as security or climate control to maximize the efficiency and versatility of any room or building. Beautiful, energy conservation, light control, can be tied into your control system. Lots of colors and options.

roller 100 Sivoia QED roller 100 shades are driven by Lutron's unique electronic drive unit (EDU) and can operate a shade with up to 100 square-feet of fabric. Multiple fabric panels can be driven by a common EDU, and up to 64 EDUs can communicate on a common link for effortless operation of multiple shades. Roller 100 shades are installed with minimal 3/4" symmetrical fabric gaps and can be mounted in a variety of configurations including inside mount, outside mount, ceiling recess and within a pocket or fascia.

roller 225 For applications requiring larger shade panels, the Sivoia QED roller 225 can operate shades up to 225 square-feet utilizing the same EDU as the roller 100 system. The roller 225 system employs a 3.75" diameter roller tube. Also, Lutron engineering has developed the Intelligent Hembar Alignment system, which ensures that roller shades with different diameter roller tubes will raise and lower in uniform speed and stop at preset positions with accuracy of +/- 1/8".

roller 64 precision controllable shading in any window

This newest member of the Sivoia QED® family has all the sophisticated features of the roller 100 and roller 225 but can fit in a small 3.5" x 3.5" pocket. The roller 64 can operate up to 64 square feet of fabric but maintains small 3/4" symmetrical light gaps on each side. Roller 64 precision movement and ultra-quiet operation is complemented by its ease-of-operation and control through elegant electronic keypads or optional infrared remote.

NEW! Narrow Window Applications

Specify roller shades as narrow as 18.5 in. bracket to bracket.
