

Conference & Board Rooms

Just as home theaters and multiroom music systems improve entertainment at home; similar systems improve productivity and communication in the workplace. Indeed, the modern corporate boardroom is becoming a melting pot of residential and business technologies.

Yesterday's clunky slide shows and dusty overhead projectors are giving way to theater-like presentations that harness the power and efficiency of computers and multimedia accessories. In today's fast-paced business environment, it's not enough to have the right information it must also be presented and disseminated quickly and persuasively.

"...All audio, video, and communications functions can be controlled with easy-to-use touch screen panels located at the conference table."

Go Electronics' experience in residential theaters, multiroom audio, lighting control, telephone, and automation systems translates faithfully to office environments, where computer networks and interoffice communications systems have become essential competitive tools.

When designed for a boardroom, a home theater system becomes a multimedia presentation system featuring large-screen projection of information directly from a computer. Telephone and intercom systems can be integrated into an office's Local Area Network (LAN) to provide, among other convenient features, real-time video teleconferencing on the boardroom's large screen. All audio, video, and communications functions can be controlled with easy-to-use touch screen panels located at the conference table.

Video conference now the way to communicate with customers and satellite offices, we have a solution. Your main office boardroom can be connected via network to your sales staff anywhere in the country; these simple software packages can be setup to fit your specific needs.

These are just examples of how audio, video, computer, and telecommunications technologies come together in a Go Electronics custom boardroom installation. Every business has its own specific needs. We will consult with you about the kinds of equipment and the type of installation that will provide the maximum benefit for your business. Ad agencies, for example, often require screening facilities for their clients. Financial firms, on the other hand, may require fast access to on-line information and two-way audio, video, and data links with international affiliates. Whatever your business, chances are it will benefit from the state-of-the-art technology and installation techniques employed by Go Electronics.
